

Omid Kianfar

Senior Front-End Developer | React.js & Next.js Expert

Phone: +989356593765 | Email: omid.kianfar.dev@gmail.com | Location: Tehran, Iran

GitHub: github.com/omidKianfar | LinkedIn: linkedin.com/in/kianfar-omid1990/

Professional Summary

Senior Front-End Developer with **6 years of experience**, specializing in building high-performance applications with **Next.js** and **TypeScript**. Proven track record of working **remotely on complex, large-scale projects for international markets, including the U.S., Canada, and Europe**. Expertise in owning end-to-end front-end architecture, focusing on scalability, maintainability, and seamless third-party integrations. A highly reliable problem solver, recognized for resolving critical technical challenges in demanding, high-volume environments and leading technical teams toward business-aligned success

Technical Skills

- **Core:** React.js, Next.js (SSR, SSG, ISR), TypeScript, JavaScript (ES6+).
- **State & Data:** Redux Toolkit, React Query, GraphQL, RESTful APIs.
- **Forms & Validation:** React Hook Form, Formik, Yup.
- **Styling & UI:** Tailwind CSS, MUI, Styled Components, Framer Motion.
- **Back-End & Cloud:** Firebase (Auth, Firestore), Supabase, Socket.io, Google OAuth 2.0, Stripe.
- **Testing & Quality:** Jest, React Testing Library.
- **Workflow & Tools:** Git, Webpack, Jira, Agile/Scrum.

Additional Technical Proficiency

- **Languages & Frameworks:** Vue.js, Laravel, C#, C++, VB.NET.
- **Databases:** MySQL.
- **Cloud & Infrastructure:** AWS, Microsoft Azure.
- **Development Tools:** Banana Cake Pop, Altair.

Professional Experiences

Front-End Developer | Apsy Company | Remote (Los Angeles, CA) Full-Time (3.5 Years)

- **Front-End Ownership:** Held sole responsibility for the front-end implementation of high-traffic web applications, independently managing architecture, feature development, and state management.
- **Performance Optimization:** Independently engineered performance enhancements by implementing manual code-splitting and lazy-loading, ensuring smooth interaction in data-heavy interfaces.

- **API Integration Strategy:** Demonstrated expertise in integrating complex API architectures; independently managed data fetching and synchronization using either GraphQL (for optimized, schema-based data retrieval) or RESTful APIs (for standard endpoint-based communication) based on project requirements.
- **Component Ecosystem & Scalability:** Developed a highly modular and reusable component ecosystem across multiple large-scale applications using MUI and Styled Components, which significantly reduced code duplication and accelerated feature development.
- **Technical Maintenance & Troubleshooting:** Acted as the primary point of contact for the front-end, independently resolving complex production bugs and optimizing component logic for long-term maintainability.

Front-End Developer | Ifuturesoftware Company | Remote (Dubai, UAE) Part-Time (4 Months)

- **Technical Problem Solving:** Contributed as a specialized front-end developer, focusing on building high-interaction components and resolving complex UI bugs for a social media platform.

Full-Stack Web Developer | Freelance | Remote (Tehran, Iran) 1.5 Years

- **End-to-End Development:** Developed and deployed web applications from scratch, handling the entire process from database design (MySQL) to front-end implementation (React.js/Vue.js) and back-end logic (Laravel).
- **Feature Implementation:** Successfully delivered custom-built solutions for various clients, ensuring that all functional requirements were met and the applications were fully responsive and user-friendly.

Personal Projects (Technical Showcases)

Mini-Jira | Project Management SaaS

github.com/omidKianfar/next-mini-jira

- **Architecture & Design:** Engineered a highly maintainable, modular SaaS application using **Next.js 16 (App Router)** and **Atomic Design** principles. Designed a decoupled system architecture that ensures rapid scalability and code reusability.
- **Advanced Feature Integration:** Implemented complex real-time collaboration using **Socket.io** and **Firestore**. Integrated a full **Stripe** subscription engine with Role-Based Access Control (RBAC).
- **Performance & UI/UX:** Developed high-performance interactive features, including a custom **Kanban board** with dnd-kit, rich-text editing with **Slate.js**, and hardware-accelerated animations via **Framer Motion** to ensure a premium user experience with zero layout shift.
- **Quality Assurance:** Built a robust codebase with advanced **TypeScript** type inheritance and integrated unit testing using **Jest** and **React Testing Library** for core UI components and validation logic

Google Calendar | Project Management SaaS

github.com/omidKianfar/next-google-calendar-app

- **Architecture & Design:** Engineered a highly maintainable, modular SaaS application using **Next.js 16 (App Router)** and **Atomic Design**. Designed a decoupled system architecture that ensures rapid scalability and code reusability.
- **Advanced Feature Integration:** Implemented complex real-time collaboration using **Socket.io** and **Firestore**. Integrated a full **Stripe** subscription engine with Role-Based Access Control (RBAC).

- **Performance & UI/UX:** Developed high-performance interactive features, including a custom **Kanban board** with dnd-kit, rich-text editing with **Slate.js**, and hardware-accelerated animations via **Framer Motion** to ensure a premium user experience with zero layout shift.
- **Quality Assurance:** Built a robust codebase with advanced **TypeScript** type inheritance and integrated unit testing using **Jest** and **React Testing Library**.

Google Calendar Clone | Productivity Tool

- **API & Security:** Developed a secure client for the **Google Calendar API** using **OAuth 2.0 (Implicit Flow)**. Engineered robust authentication logic, isolating sensitive OAuth flows from the UI layer to maintain a clean and secure codebase.
- **Dynamic Data Handling:** Implemented real-time event rendering using **FullCalendar**, with advanced date manipulation via **Day.js** to provide a seamless scheduling experience.
- **Architecture & Optimization:** Applied a modular approach to UI/UX, utilizing **Lazy-loading** for modals and **Suspense** to ensure high-performance rendering of heavy calendar components.
- **Tech Stack:** Next.js, TypeScript, Tailwind CSS, FullCalendar, React Hook Form, Yup.

Select Companies Projects

Infuuse | Enterprise Business Automation Platform (Corporate)

- **Architecture & Strategy:** Led the front-end development of a large-scale B2B SaaS platform using **Next.js** and **GraphQL**. Designed a robust **Hierarchical Route Protection System** with custom AuthGuard and RoleGuard patterns for centralized access control across the core app, **Admin Panel**, and **Landing Page**.
- **Comprehensive Ecosystem:** Engineered the full user-facing experience, including a high-converting **Landing Page** and an intuitive **Admin Dashboard** for platform management, utilizing **Atomic Design** for a consistent and modular UI/UX.
- **Complex Integrations:** Engineered seamless multi-channel communication systems (Twilio, Google APIs, Stripe) and managed complex business logic including real-time inbox synchronization, **Rich Text Editing** (Slate.js) workflows, and dynamic form management using **React Hook Form** and **Yup**.
- **Performance & Scalability:** Optimized application performance in a heavy-data environment by implementing **lazy-loading** for complex UI components and optimizing data fetching via **React Query** and **Redux Toolkit**.
- **Compliance Note:** Project architecture, business logic, and specific client-side implementations are protected under NDA.

Octobit | Educational Scenario Platform

- **Architecture & Strategy:** Led the front-end development of an educational platform using **Next.js** and **GraphQL**. Architected a complex **Node-Graph Editor** using React Flow, enabling admins to visually construct multi-path branching scenarios with conditional logic (pass/fail metrics).
- **Feature Engineering:** Implemented a specialized **Voice-Stress Detection** module using AWS Amplify (Predictions) to analyze user audio input in real-time, integrated with a custom assessment scoring system.

- **Complex Business Logic:** Engineered a dynamic engine for branching paths, where user progress is calculated based on assessment metrics and dynamic content delivery (video/text/blog).
- **State & Data Management:** Managed deeply nested application states for multi-role dashboards using **Redux Toolkit** and **Valtio**. Handled complex form validations for multi-step scenario configuration using **React Hook Form** and **Yup**.
- **Ecosystem:** Built a fully dynamic landing page synchronized with the admin dashboard, and optimized high-interaction areas (like rich-text editors with custom node-views) using **Atomic Design** principles.
- **Compliance Note:** Project architecture, business logic, and specific client-side implementations are protected under NDA.

Select Professional Recommendations

Zuheir Montazeri | General Manager at Apsy company

Omid is a React developer who is not only technically skilled but also deeply committed to aligning technical execution with business goals.

Mohammad Fardin | Lead Front-End Developer at Apsy company

I highly recommend Omid as both a colleague and a team lead. He is motivated, responsible, and brings positive energy to the team.

Ashkan Roshanaie Zadeh | Project Director & Client Lead at Apsy company

Omid possesses a keen intellect and an impressive ability to quickly grasp complex concepts, consistently delivering high-quality work.

Recommendations: [linkedin.com/in/kianfar-omid1990/details/recommendations](https://www.linkedin.com/in/kianfar-omid1990/details/recommendations)

Education

Bachelor's degree in Software Engineering.
